Dear Customer and Partner

I am writing to announce the transition of i.LON 700 model number (72201R-140) to SmartServer IoT model number (72201R-240).

As you may be aware, we recently announced our SmartServer IoT platform – the industry’s first open and end to end industrial IoT edge server for controls and automation. As a part of this introduction, we are rebranding our entire line of edge servers, routers and network interfaces under SmartServer IoT brand. As such, the i.LON 700 is now re-branded as the base model of the SmartServer IoT Pro.

The two model numbers are identical in pricing and performance from a form, fit and function perspective – in fact it is the same product under the hood. SmartServer IoT products now ranges from providing routing and network interface functionality to a fully programmable edge server with platform features such as a central management system and open APIs.

With this notice, we expect to transition any orders for model number 72201R-140 (i.LON 700) to model number 72201R-240 (SmartServer IoT Pro). If you have any questions regarding this change, please do not hesitate to contact your Adesto sales representative or contact us embedded-iot@adestotech.com.

Best Regards,

Apurba Pradhan
